INTRODUCTORY PROFILE

Commercially astute Full Stack Software Engineer with extensive experience designing, scaling, and securing data-driven applications across the full stack using TypeScript, Node.js, and modern frameworks. Demonstrates a strong track record of optimising platform performance, lowering tech debt, and increasing test coverage across multi-million user bases. Combines technical depth with cross-functional leadership and stakeholder management skills gained in procurement.

CORE COMPETENCIES

Full Stack Architecture | TypeScript & Node.js | Database Management | Performance Optimisation | Git Workflows | API Design & Integration | Application Security | Test Coverage & Quality Assurance | Cloud Deployments (AWS/GCP)

PROFESSIONAL EXPERIENCE AND ACHIEVEMENTS

Full Stack Developer

Ocado Retail, Hatfield

May 2026 – present

Assumed in-house ownership of critical business applications previously managed by external vendors. Directed efforts to eliminate technical debt, optimise platform performance, and drive new feature development for Ocado's business operations. Utilising TypeScript, Angular and Node (Nest.js).

Key achievements

- Remediated critical security vulnerabilities, ensuring robust data protection and safe application access for external users.
- Enhanced overall application performance by up to 70% by implementing industry best practices for front-end rendering and API efficiency.
- Transitioned the application architecture into a monorepo to streamline development workflows, building knowledge of GCP by configuring Cloud Build for automated deployments.

Travel Break – Took a sabbatical with my partner to explore from Japan to New Zealand.

Sept 2025 – Mar 2026.

Operations Developer

Chip Financial, Shoreditch, London

August 2025 – September 2025

Short contract role to develop in-house applications for the operational financial service teams to improve business efficiency and meet compliance legislation.

Key achievements

- Created internal tools making use of React, Node and Postgres (Databricks) focusing on user experience.
- Worked with internal stakeholders to develop requirements, collect feedback and continuously improve the applications to maximise efficiency of business processes.

Junior Software Engineer

Henry Schein One, Remote, Gillingham

June 2024 – June 2025

Facilitated continuous improvement and scaling of a large-scale web application serving over 3 million users, focusing on feature delivery, code reliability, and cross-team collaboration using TypeScript, Angular, and Node.js.

Key achievements

- Facilitated successful platform launch in Canada by contributing to localisation efforts; ensured compatibility

with regional requirements and extended reach to new user markets.

- Built knowledge of AWS services, including RDS, DynamoDB, and Lambda, to support serverless architecture and enhance application scalability.
- Increased automated test coverage to +80% while cutting bugs and reducing developer support tickets by 70% having designed and implemented high-impact unit test suites for legacy code.

Web Developer

Beachshore Design, Watford

October 2023 – January 2024

Delivered custom, high-performance web platforms using HTML, CSS, JavaScript, PHP, and MySQL. Managed end-to-end client projects from requirements capture through deployment, customising in-house CMS solutions and maintaining legacy codebases to ensure site reliability.

Key achievements

- Achieved 100% repeat business from clients by delivering optimised web projects with a strong focus on usability and customer satisfaction in line with budgets of up to £10,000.

EARLY CAREER SUMMARY

Enjoyed eight years' progression from Graduate Trainee to Senior Buyer within global engineering organisations; delivered complex sourcing projects and managed multi-million-pound supplier relationships. Gained experience in contract negotiation and stakeholder management.

PROFESSIONAL DEVELOPMENT

Full Stack Web Development Bootcamp

University of Edinburgh, Remote

March 2023 – July 2023

Ranked 1st out of 109 students for project excellence; demonstrated advanced technical proficiency and commitment to high-quality software solutions. See portfolio (hyperiondev.com/portfolio/139412).

Bachelors of Engineering (BEng) - Mechanical Engineering

University of Leicester, Leicester

PROJECT HIGHLIGHTS

Public API Platform | <https://soupabase.com>

- Launched public API platform as a developer productivity tool; enabled fast data queries with clear documentation (deployed via Cloudflare Workers to ensure high scalability, minimal latency, and reliable external integrations).

Full Stack AI SaaS | <https://flaude-ai.ianhitchman.co.uk/>

- Engineered an AI SaaS as a proof concept to demonstrate usage of modern technologies. Utilising React, Node.js, Stripe and Ollama to run the AI model. Authentication is via email/password or OAuth social logins.

IT SKILLS

Programming Languages: JavaScript, TypeScript, HTML, CSS

Frontend Frameworks and Libraries: Angular, React, HTMX

Backend / API: Node.js, GraphQL, Nest.js, Hono

DevOps and Cloud: CI/CD, AWS, GCP, Cloudflare Workers

Testing and Quality: Jest, Playwright, Test-Driven Development (TDD) methodology

Databases: MongoDB, PostgreSQL, SQL

Version Control: Git, GitHub, Gitlab
